

1. Renewable Natural Gas logo is too large. And if you adjust the window size, it overlaps with the other nav bar elements. (see next page)

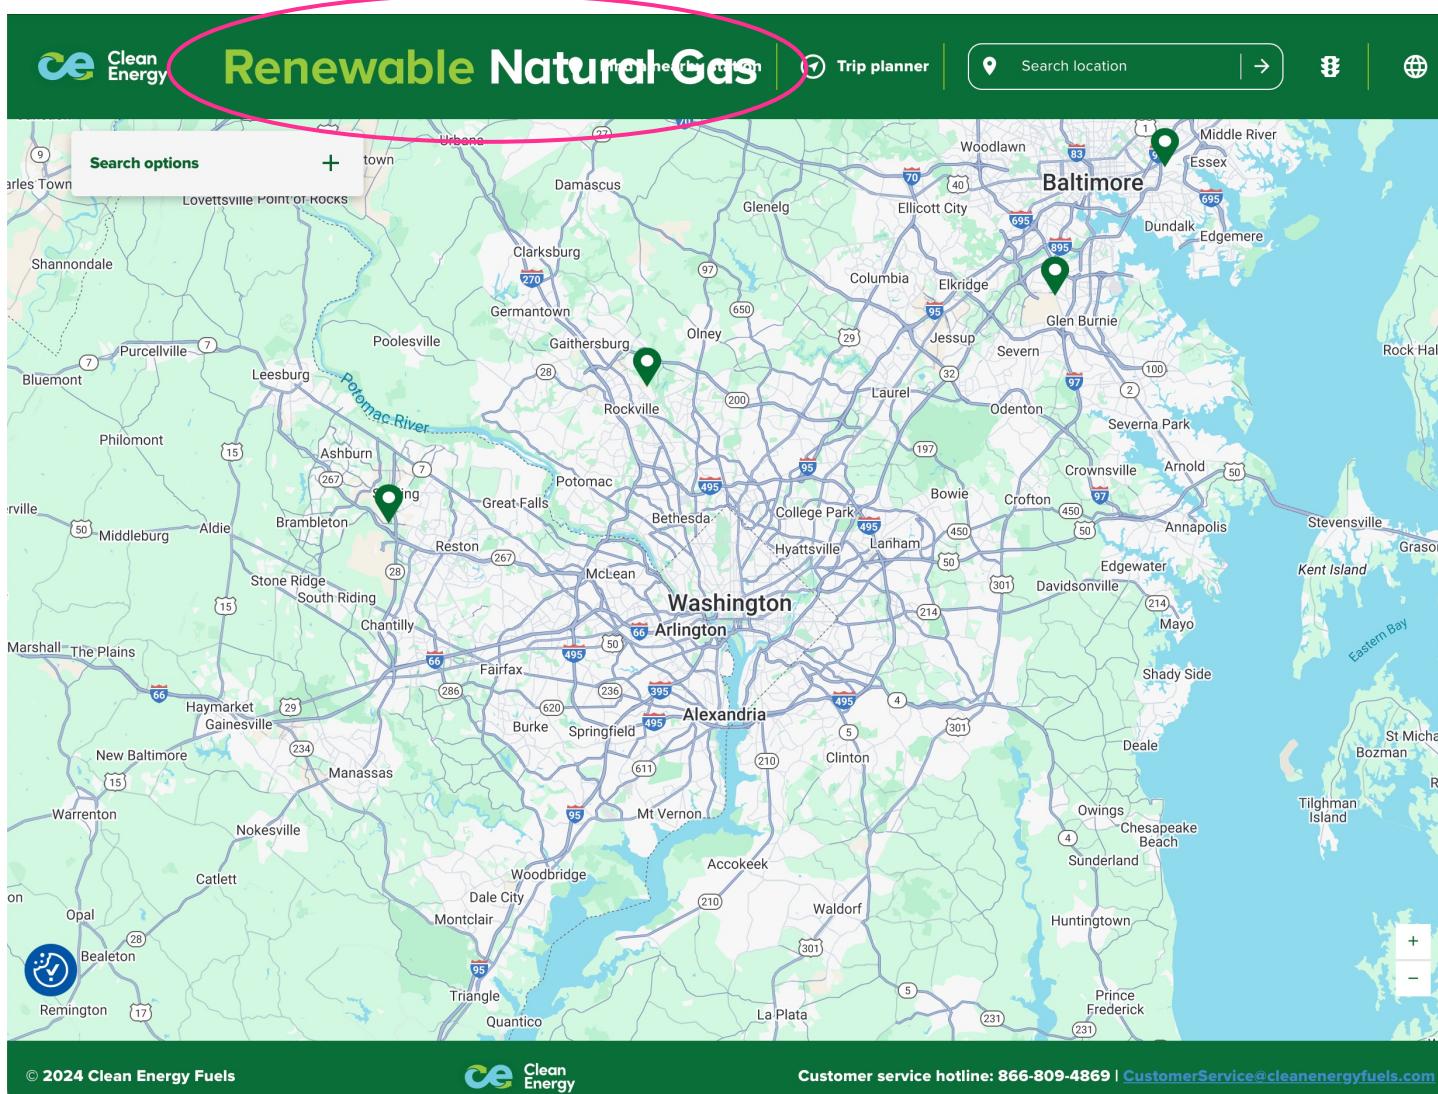

2. Please make this 2025

3. Remove, unnecessary

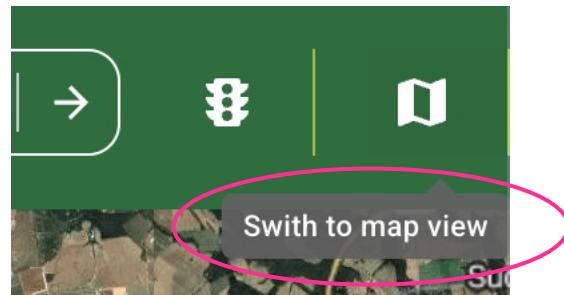

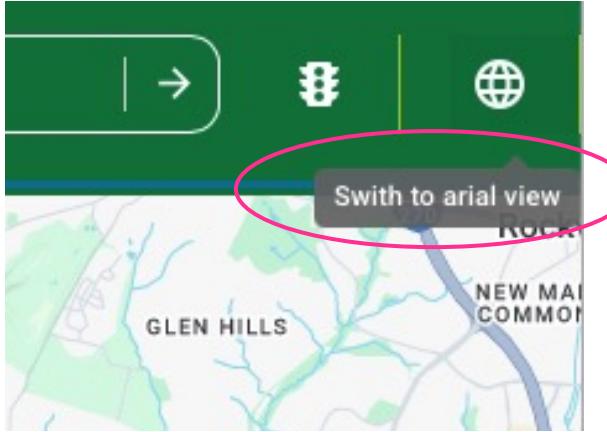

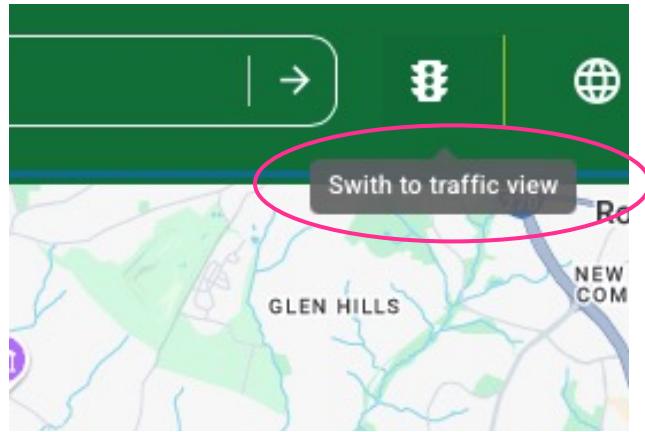

4. Please make this hyperlink arrow green and remove caps:
customerservice@cleanenergyfuels.com

5. Renewable Natural Gas logo overlaps with “Find a nearby station” when you change the window size

6. Is there a reason the map defaults to Washington DC when it can't read your location?

Chevron defaults to San Ramon, CA where it is headquartered. Perhaps we should take a similar approach and show Southern California (Newport Beach), -- but only if the map cannot read your current location.

7. When you hover over the traffic and globe icons, the text has typos:

Switch to traffic view
Switch to **aerial** view
Switch to map view

8. There should be a comma between the end of the street name and the city.

9. Under “Accepts” – “Clean Energy” should be two words, not one. “Comdata” should not have a capital “D” in the middle. “Mastercard” should not have a capital “C” in the middle.

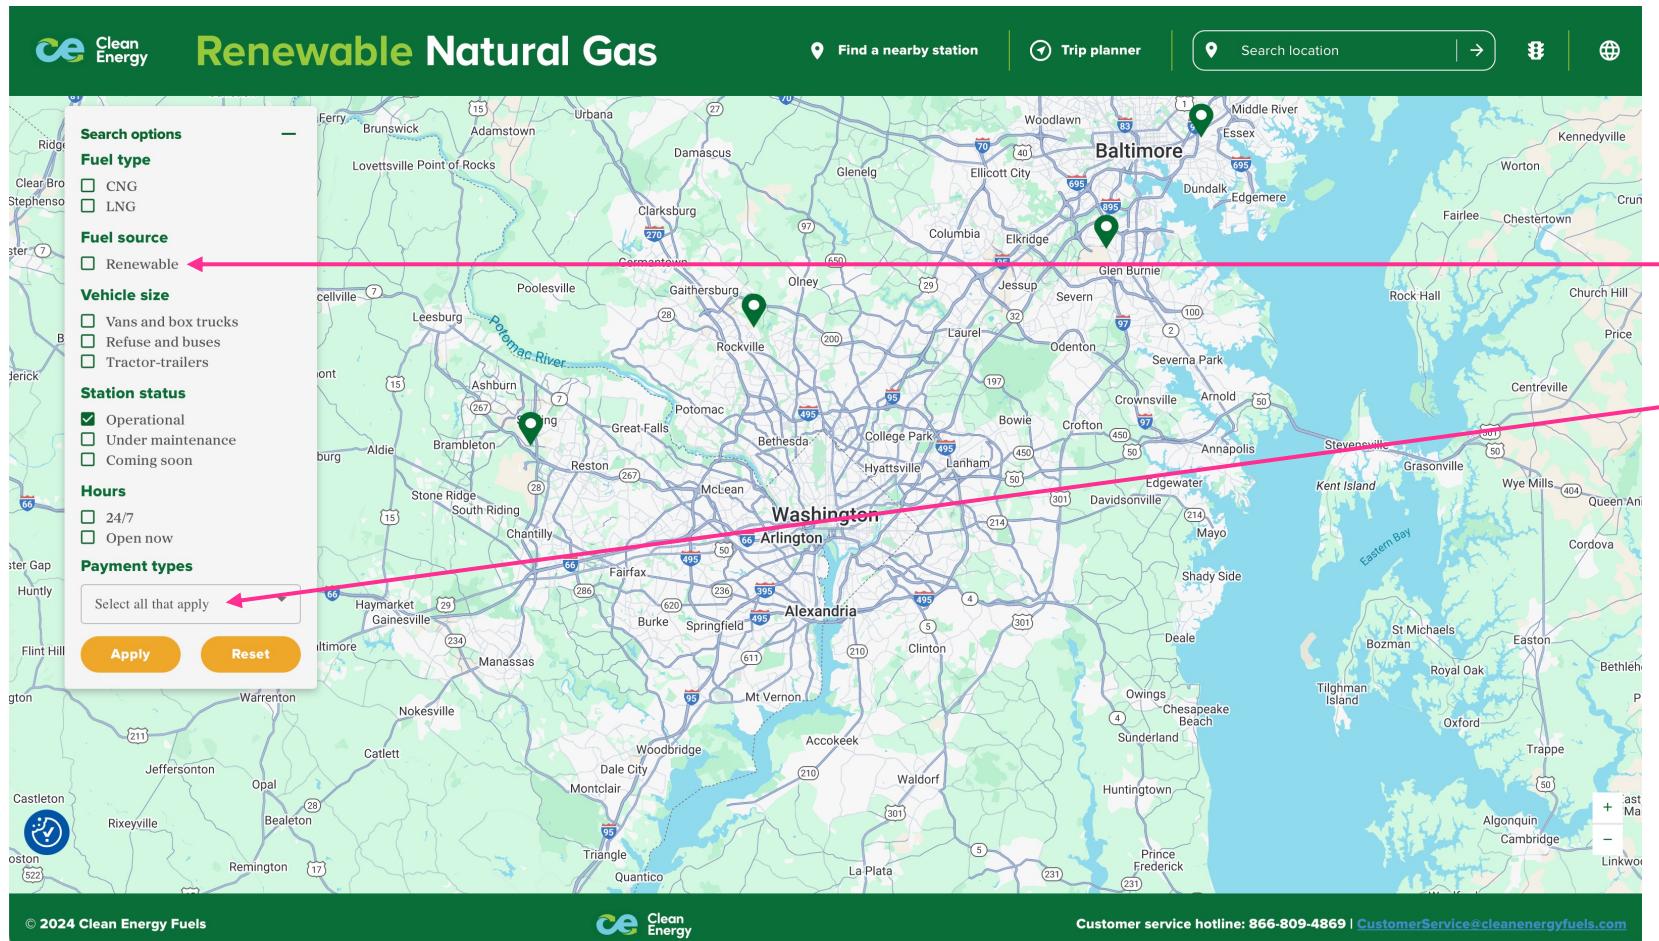

10. Swap positions between “Fuel types” and “Vehicle types accepted”

11. Fuel types (“types” should be lowercase)

12. Instead of “Vehicle types accepted” use “Max. vehicle size”

13. Add “(RNG)” after Renewable, so it reads “Renewable (RNG)”

14. “Tractor-trailers (“trailers” should be lowercase)

15. Under Fuel source, add "(RNG)" after Renewable, so it reads "Renewable (RNG)"

16. Can this text be Proxima Sera to match the rest of the text?

17. The map text on satellite view looks low-res/blurry. When I compare with satellite view on regular Google Maps, it looks much sharper. Can we fix this?

19. “Refuse And Buses” should be “Refuse and buses”

20. Tested a search while in satellite mode. It brought me to this screen. It happens fairly often when searching and switching between the map types, looks like it's slowly loading in assets in squares or something.

21. If you click Reset in Search options, it shows this map with the Operational box checked – which can't be correct.

But then if you click “Apply” it goes to the correct pins for Operational stations.

22. If you clear all the boxes under “Station status” and click “Apply” it shows the three stations that are “Under maintenance.” It shouldn’t show any stations.

23. If you choose “Coming soon” you see the three stations that are labeled as “Under maintenance” – it shouldn’t show any unless we have stations in that category.

24. If someone clicks, “Vans and box trucks” they should see all the station pins (Vans and box trucks, Refuse and buses, and Tractor-trailers), because they have the smallest vehicles and can fuel at all of our stations.

25. If someone clicks “Refuse and buses” they should see these two pins AND all the pins from “Tractor-trailer” because they can fit at a Tractor-trailer-friendly station as well.

This is correct as is, no changes.
Tractor-trailer should only show
Tractor-trailer pins.

26. If someone clicks “Open now” – then no pins show up. If that’s correct, then let’s remove this option from search, because what’s the point.

27. Multiple payment types do not appear to be accepted at ANY station when you search. I don’t think this correct because I’m seeing some of these appear on the individual station listings. I’m also seeing some payment forms on individual station listings that aren’t in the search list (QuikQ) and TCHK I assume is Tcheck? We should be consistent in our language. Please doublecheck all.

The screenshot shows a map of the Chicago metropolitan area and surrounding regions. The map includes labels for major cities like Chicago, Aurora, Naperville, and Homewood. It features a network of roads and highways, with several green dots representing gas station locations. A red pin labeled 'A' is placed on the map, specifically over Homewood, IL. The interface includes a search bar at the top right with the placeholder "Homewood, IL, USA", a "Find a nearby station" button, a "Trip planner" button, and a globe icon. At the bottom, there's a "Customer service hotline: 866-809-486" and a "No options" message in a box.

Homewood, IL, USA

No options

Customer service hotline: 866-809-486

28. If you search for a place, sometimes the pin shows up directly on top of a station pin, and then it's hard to click the pin behind it (see example for Homewood, IL).

Do we need to drop a red “A” pin if we’re not putting in a specific address? If I search for “Homewood, IL” in Google Maps, it doesn’t place a pin for me.

Also, when I go to the Search bar afterward, the cursor line blinks but “Homewood, IL, USA” remains in the field. Shouldn’t that clear out so I can type something new?

OTHER THINGS

29. After location is allowed, we're brought to a page with an icon that is the wrong brand color

30. We try to zoom in, the map doesn't stay centered on our location but juts us to the right. The zoom out and zoom in buttons do some random things. Sometimes on 2 clicks zoom out, I get zoomed in.

31. When you Build a Trip – shouldn't we somehow highlight the nearest CE stations along the way?
